Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: Plays a role as a receptor for the recognition of MHC class I HLA-B molecules by NK cells and some cytotoxic T-cells.
-1. SUBUNIT: Can form disulfide-bonded heterodimer with CD94.
-1. SUBCELLULAR LOCATION: Type II membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCE FROM N.A., ALTERNATIVE SPLICING, AND VARIANTS LEU-79 AND

Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).
-!- FUNCTION: Plays a role as a receptor for the recognition of MHC class I HLA-E molecules by NK cells and some cytotoxic T-cells.
-!- SUBUNIT: Can form disulfide-bonded heterodimer with NKG2 family

Eur. J. Immunol. 23:1648(1993)

Eur. J. Immunol. 23:1648(1993)

Signal transmitting receptor in lymphocytes, natural killer (NK) cells, and platelets

C. -- FUNCTION: Involved in Lymphocytes, natural killer (NK)

C. -- SUBENIT: Homodimer; disulfide-linked.

-- SUBCELLULAR LOCATION: Type II membrane protein.

-- SUBCELLULAR LOCATION: Type II membrane protein.

-- TISSUE SPECIFCITY: EXPRESSED ON THE SURPACE OF ACTIVATED T CELLS,

-- FUNCTION: BY the activation.

-- INDUCTION: BY the activation.

-- INDUCTION: BY the activation.

-- INDUCTION: BY the activation of T lymphocytes.

-- TYPE CONSTITUTIVE SER/THE PHOSPHORYLATION IN BOTH MATURE

-- PTM. CONSTITUTIVE SER/THE PLOSPHORYLATION IN BOTH MATURE

-- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CYTOPLASMIC (POTENTIAL).

!munity 12:687-698 (2000)

!- FUNCTION: Plays a role as a receptor for the recognition of MHC class I HLA-E molecules by NK cells and some cytotoxic T-cells.

- SUBCELLULAR LOCATION: Type II membrane protein. with CD94.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                233 EXTRACELLUIAR (POTENTIAL).

-I-SUBUNIT: Can form disulfide-bonded heterodimer with CD94.
-I-SUBCELLULAR LOCATION: Type II membrane protein.
-I-TISSUE SPECIFICITY: Natural Killer cells.
-I-SIMILARITY: Contains 1 C-type lectin family domain.

-!- FUNCTION: Plays a role as a receptor for the recognition of MHC class I HAA-E molecules by NK cells and some cytocoxic T-cells.
-!- SUBUNIT: Can form disulfide-bonded heterodimer with CD94.
-!- SUBCELLULAR LOCATION: Type II membrane protein.
-!- STSUE SPECIFICITY: Natural killer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          warkt; bwu014; C TYPE LECTIN 2; 1.

-!- FUNCTION: Mediates transmembrane signaling in natural killer (RIX) cells and so may act as a receptor able to selectively trigger NK cell activity.

-!- SUBGNIT: Homodimer.

-!- SUBCELLULAR LOCATION: Type II membrane protein.

-!- TISSUE SPECIFICITY: Natural killer cells.

-!- MISCELLANBOUS: Ligand binding may be calcium dependent.

-!- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                                                                                                                                                                                               DB 1; Length 240;

```
This is the amino acid sequence of human mast cell function- associated antigen (MAFA), a type II membrane glycoprotein. CDNA (see AAV84198) encoding human MAFA can be obtained from myelogenous leukaemic cell line KUB12 or cDNA derived from human lung tissue. The encoded protein is similar to the rat form (see AAW8827) having an intracellular domain containing a putative immunoreceptor tyrosine activation motif (ITIM) and an extracellular lectin-like domain. 2 Alternatively spliced forms (see AAW88266-67) of human MAFA have been identified. Polypeptides and synthetic peptides (see AAW88258-64) based on these truncated MAFA proteins can be used in methods for the treatment of inflammatory and allergic diseases, and tumour growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; pharmaceutical composition, mast cell function associated antigen; MAFA; natural killer cell; NK; tumour; therapy; cytotoxic T-cell; CTL;

The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (MAFA) ligand on a target cell, and prevents or inhibits natural killer (NK) - or T-cell-expressed cell surface MAFA from binding to MAFA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAFA binding to a ligand on a target cell. by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition or the subject, to NK or T-cell or the target cell expressed celled; tinn amount sufficient to inhibit cell surface MAFA binding to the ligand on the target cell. The agent or the composition is useful for treating on the target cell. The agent or the composition is useful for treating or tumour by stimulating the cyctoxic activity of an NK cell or a cytocoxic T-cell (CTL), where the tumour comprises an NK cell- or a cytocoxic tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is human MAFA protein
                                                                                                                                                                                                                                                                                                                                                                                                               ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Binding domain; immunoglobulin; fusion protein; cytostatic; antiarthritic; immunosuppressive; antidabetic; antithyroid; anteroprotective; hinge region; immunoglobulin heavy chain; cH2 constant region; CH3 constant region; CH3 constant region; GH3 constant region; GH3 constant antibody dependent cell-mediated cytotoxicity; ADCC; complement fixation; antibody dependent call-mediated cytotoxicity; ADCC; complement fixation; rheumatoid arthritis; myaethenia gravis; Grave's disease; rheumatoid arthritis; myaethenia gravis; Grave's disease; type I diabetes mellitus; multiple sclerosis; autoimmune disease.

Ledbetter JA,

m

comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin heavy chain CH2 constant region polypeptide, an immunoglobulin heavy chain CH2 constant region polypeptide that is fused to the hinge region polypeptide.

CC funge region polypeptide comprises: a wild-type human IgG1 immunoglobulin hinge region polypeptide, amutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide, where the first cysteine is not mutated; a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the first cysteine is not mutated; a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues and a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more expective residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more expective residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains

CC apparent residue; and a mutated human IgG1 immunoglobulin fusion protein is capable of at least one immunoglobulin hinge region protein is capable of at least one immunological activity comprising antibody dependent cell-mediated cytotoxicity (ADCC) and complement fixation. The binding domain polypeptide is capable of specifically binding to an antidem. Also included are an isolated polynucleotide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polymucleotide (operably linked to a promoter), a host cell transformed or transfected with a recombinant expression a host cell transformed or transfected with a recombinant expression construct, producing the binding domain-immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein, a recombinant or polymucleotide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell assublet having or suspected of having a malignant condition or a B-cell New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, Grave's disease or autoimmune disease. The invention relates to a binding domain-immunoglobulin fusion protein Disclosure; SEQ ID NO 196; 157pp; English.

Claim 20; SEQ ID NO 35810; 103pp; English.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PRR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to reserve normal carivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations capponable for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and mind amino acid sequences have and products dependent on DNA and mind amino acid sequences the context diagnostic and to produce other types of data and products dependent on DNA and mind amino acid sequences. amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published pct sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (MAFA) ligand on a target cell, and prevents or inhibits natural Killer (NK) - or T-cell-expressed cell surface MAFA from binding to MAFA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAFA binding to a ligand on a target cell, by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition on the subject, to NK or T-cell or the target cell e.g. tumour cell, in an amount sufficient to inhibit cell surface MAFA binding to the ligand on the target cell. The agent or the composition is useful for treating tumour by stimulating the cytotoxic activity of an NK cell or a cytotoxic common comprises an NK cell or TI-susceptible tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is mouse MAFA protein
                                                                                                                                                                                                                                                                                                  Mouse; pharmaceutical composition; mast cell function associated antigen; MAFA; natural killer cell; NK; tumour; therapy; cytotoxic T-cell; CTL; immunosuppressive; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pharmaceutical composition for treating tumor by stimulating cytotoxic activity of natural killer cell or T-cell, comprises an agent that binds to mast cell function-associated antigen ligand on target cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

New polypeptide having a sequence corresponding to human mast cell function-associated antigen - useful in forming and manufacturing pharmaceutical compositions in the treatment of inflammatory and allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This is the amino acid sequence of rat mast cell function-associated antigen (MAPA), a type II membrane glycoprotein found on mast cells and basophils. The invention relates to cloning of the human MAPA molecule (see AAW88265) and to the discovery of splice variants (see AAW88266-67) of human MAPA that are not found in rat. Polypeptides and synthetic and polymucleotides encoding them, can be used in methods for the treatment of inflammatory and allergic diseases (e.g. rheumatoid arthritis and asthma), and tumour growth
                                                                                                                                                                                                            Mast cell function-associated antigen, MAPA, splice variant, rat, inflammation; allergy, asthma, rheumatoid arthritis; tumour; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 188;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         51.4%; Score 525.5; DB 2; Length 53.5%; Pred. The present invention relates to a pharmaceutical composition comprising antigen (WAPA) ligand on a target cell, and prevents or inhibite natural killer (NR) or T-cell-expressed cell surface MAPA from binding to MAPA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NR- or a T-cell-expressed cell surface MAPA binding to a ligand on a target cell, by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition on the target cell. The agent or the target cell e.g. tumour cell, in an amount sufficient to inhibit cell surface MAPA binding to the ligand on the target cell. The agent or the composition is useful for treating a tumour by stimulating the cytotoxic activity of an NK cell or creating tumour by stimulating the cytotoxic activity of an NK cell or CTL-susceptible tumour cell. The invention is also useful for inhibiting an activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pharmaceutical composition for treating tumor by stimulating cytotoxic activity of natural killer cell or T-cell, comprises an agent that binds to mast cell function-associated antigen ligand on target cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 CQGSNYSTCASCPSCPDRWMKYGNHCYYFSVEEKDWNSSLEFCLARDSHLLVITDNQEMS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel DNA encoding a mast cell function-associated antigen (WAFA) - useful for screening for ligands of MAFA which are useful for prevention of inflammatory and allergic reactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A soluble form of mast cell function-associated antigen (MAFA) can be produced by recombinant techniques for use in the ligand- screening assay. The ligands that are identified may be used alone or in combination with the MAFA to prevent inflammatory and allergic reactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               135 LRNNSGWRWEDGSPLNFSRISSNSFVQTCGAINKNGLQASSCEVPLHGVCKKV 187

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the amino acid sequence of human mast cell function- associated antigen (MAFA) splice variant huMAFA(B3/4-), which lacks the C-lectin-like domain of human MAFA (see AAM88265) but retains the intracellular and transmembrane domains as well as the extracellular C-terminal tail. Truncated MAFA polypeptides including huMAFA(B3/4-), and polymucleotides encoding them, as well as synthetic peptides (see AAW88258-64, AAW88268-72), can be used be used in compositions for the treatment of inflammatory and allergic diseases (e.g. rheumatoid arthritis and asthma), or tumour growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     P
                                                                                                                                                                                                                                                                                                                                                                                                                                    intracellular and transmembrane regions of human MARA (see AAM88265), followed immediately by a polyproline motif (see AAM88264) due to a reading frameshift. This unique motif has been used to design peptides (see AAW8829-64, AAW88268-72) that inhibit T cell antigen receptor-dependent activation induced by interleukin-2 (IL2) secretion from human Jurkat T cells or IgE dependent degranulation of rat basophil leukaemic cells. Inhibition of IL2 production prevents T cell proliferation and suppresses the immune system. These peptides, truncated MARA polypeptides including huMAFA(E3-), and polynucleotides encoding them, can be used in compositions for the treatment of inflammatory and allergic
                                                                                                                                                                                                                                                                                                        New polypeptide having a sequence corresponding to human mast cell function-associated antigen - useful in forming and manufacturing pharmaceutical compositions in the treatment of inflammatory and allergic diseases, and tumour growth.

New NKp80 polypeptides having a triggering NK activity, useful as markers for typing lymphoproliferative diseases of granular lymphocytes, or for identifying abnormal cells in the whole lymphocyte population in patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          having a triggering NK activity, or its immunogenic fragments. The NKp80 polypeptide is useful as NK cell markers, as markers for typing plymphoproliferative diseases of granular lymphocytes (LDGL), or for identifying abnormal cells in the whole lymphocyte population of the patient. The antibodies against these polypeptides are useful for inhibiting NK cell cytotoxicity or NK cell depletion. The sequence represents the human NKp80 polypeptide of the invention. N.B. The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WNSSLEFCLARDSHLLVITDNQEMSLLQVFLSEA-FCWIGLRNNS---GWRWEDGSPLNF 151

```
Human novel extracellular matrix protein, Seg ID No 470.
  AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polymucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to polymucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polymucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the diagnose and treat immune/haematopoietic-related diseases, especially cancer metastases of haematopoietic-derived cells. AAK64703
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DQTVLCQSEWLKYQGKCYWFSNEMKSWSDSYVYCLERKSHLLIHDQLEMAFIQKNLRQL 135

human secreted extracellular matrix proteins (SPs). The polynucleotides can divident secreted extracellular matrix proteins (SPs). The polynucleotides can and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased expression of SPs. The SP polynucleotide or a vector expressing them may be administered to treat diseases by gene therapy. Antisense molecules may be administered to down regulate expression of SPs by binding with the cells own genes and probe in diagnostic assays. The SPs may also be used as INA probe in diagnostic assays. The SPs may also be used as INA produce antibodies and to identify modulators (agonists and antagonists) of the SPs. The anti-(SP) antibodies and antagonists may also be used to down regulate expression and activity of SP and as diagnostic agents for detecting the presence of SPs in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumacoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of diseases (e.g. Altheimer's disease, parkinson's disease), neurological (c. the breast or liver, Sezary syndrome and Gaucher's disease), neurological (c. the breast or liver, Sezary syndrome and Gaucher's disease), neurological (c. the breast or liver, Sezary syndrome and Gaucher's disease), neurological (c. the breast or liver; disease, parkinson's disease) cardio-(ceretions caused by bacteria, viruses and thugi and ocular disorders (e.g. corneal infections). Other uses include wound healing, maintenance of of organs before transplantation, support of cell culture of primary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             75 ----CPDRWMKYGNHCYYFSVEEKDWNSSLEFCLARDSHLLVITDNOEMSLLQVFLSEA 129

The invention relates to novel genes (ABQ66521-ABQ66785) and proteins (ABP47846-ABP48110) useful for preventing, treating or ameliorating conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancers do the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune concerns actions of the adversal and the actions of the actions and ulcertive colitis; (c) anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcertive colitis; (c) ardiovascular disorders e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form part of the printed specification, but was obtained in electronic format directly communication of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    135
